Cladding Pumped Optical Fibers

**Erbium-Ytterbium Double and Glass Clad, Erbium-Ytterbium PM Double Clad**

These fibers enable fiber lasers and amplifiers with good beam profile characteristics, high wallplug efficiencies, compact footprints, superior reliability, and maintenance-free operation. They also accommodate high energies during pulsed operation and at high repetition rates.

**Erbium-Ytterbium (Double Clad)**

The single-mode core of this fiber is co-doped with both erbium and ytterbium. It is then surrounded by a silica cladding and covered with a low-index protective coating. The resulting double-clad fiber is used for single-mode fiber lasers and amplifiers operating in the 1530 to 1565 nm range.

**Erbium-Ytterbium (Glass Clad)**

The core of this fiber is identical to that of the erbium-ytterbium double-clad fiber described above. It is surrounded by a shaped glass inner cladding, which in turn is surrounded by a circular outer glass cladding. This glass-clad fiber is used for single-mode fiber lasers and amplifiers operating in the 1530 to 1565 nm range.

**Erbium-Ytterbium PM (Double Clad)**

TrueMode-kW cavities are designed to support one of two delivery options. For stand-alone use, single-mode output is efficiently coupled to common 20/400 µm delivery fiber. This provides a cladding-stripped and speckle-free clean output beam, ready for splicing to cabling. For combined use, a compatible output fiber is provided.

**Typical Applications**

- Construction of multi-watt amplifiers around 1550 nm
- LIDAR, CATV, FTTx, FSOC

**Features and Benefits (EY Double and Glass Clad)**

- Core recipe optimized for high optical efficiency and shortest device lengths
- Pump wavelength 910 - 980 nm
- Low-splice-loss achieved to conventional single-mode fiber and most commercially available passive double-clad fibers
- High conversion efficiency
- Patented cladding designs result in efficient mode mixing while maintaining good splice-ability
- Robust against 1 µm parasitics

**Additional Features and Benefits (EY Glass Clad)**

- Higher reliability: no optical power in contact with polymer coating, hence no coating degradation concerns
- Ease of assembly: Circular 125 µm outer cladding means that conventional telecom-grade splicers, cleavers, recoaters can be used
- Improves spliceability with conventional SM and MM passive fibers
- No low-index recoating necessary: even heat-shrink splice protector works well

Cladding-Pumped Optical Fibers

**Ytterbium, Ytterbium PM Double Clad**

The single-mode core of this optical fiber is doped with ytterbium. It is then surrounded by a silica cladding and covered with a low-index protective coating. These fibers enable fiber lasers and amplifiers with good beam profile characteristics, high wallplug efficiencies, compact footprints, superior reliability, and maintenance-free operation. They also accommodate high energies during pulsed operation and at high repetition rates.

**Typical Applications**
- Fiber lasers
- Fiber amplifiers
- High-energy, pulsed operation

**Ytterbium**

The single-mode core of this fiber is doped with ytterbium. It is then surrounded by a silica cladding and covered with a low-index protective coating. The resulting double-clad fiber is used for single-mode fiber lasers and amplifiers operating in the 1040 to 1200 nm range.

**Typical Applications**
- Construction of single-mode fiber lasers emitting at 1040 to 1200 nm

**Features and Benefits**
- Star-shaped cladding gives efficient mode mixing and improves spliceability
- Low-index polymer coating maintains strength and gives high cladding NA

**Ytterbium PM (Double Clad)**

Ytterbium double-clad PM optical fibers are used for single-mode optical fiber lasers and amplifiers operating in the 1040 to 1200 nm range with polarized outputs.

**Features and Benefits**
- Ytterbium concentrations optimized for efficiency
- Lowsplice-loss achieved to conventional single-mode fiber and most commercially available passive double-clad fibers

Cladding Pumped Optical Fibers

**Laser and Amplifier**

**Cladding Pumped Fiber LASER (CPFL)**

- 7 Broad Area Emitters
- Fiber Bragg Gratings

Output Wavelength:
- 1064 nm
- 1083 nm
- 1100 nm
- 1117 nm

**Cladding Pumped Fiber AMPLIFIER (CPFA)**

- 6 Broad Area Emitters
- SIGNAL
  - 1.00 m or 1.55 m

**Cladding Pumped Fibers**

- Also Available Separately

**Combiners for CPF Lasers**

- Multimode Input (105/125 µm)
- CPF Output (0.45 NA)

**Cladding Pumped Fiber Gain Module Configurations**

- Includes Combiner and Cladding Pumped Fiber Gain Module Configurations
- Yb, PM Yb, ErYb Double & Glass Clad, PM ErYb
